

Mike Doyle - Technical information

General information.

The sound system will arrive at around midday. We will need access to the venue with a van at this point.

We would like to use three of your risers:

- (1) 8' x 8' for the drums centre stage.
- (2) 8' x 4' for the guitarist SR.
- (3) 8' x 4' for the bass player SL.

The band call is at 5pm and will usually be done by 6:30.

Running times: Act 1 - one hour, Interval - twenty minutes, Act 2 - one hour.

We usually take about an hour to pack up and leave.

Lighting.

We require a general four colour wash with anything that makes the stage look good. Bright for up tempo numbers and more subtle for the slower ones. If you have a star cloth we would be grateful if we could use it. A single follow spot and operator will also be required.

Sound.

We are pretty much self-contained sound wise but we would like to tie in to the house system if we feel it is necessary. Our sound desk is 4' x 3' and we would like to place it in the usual FOH mix position.
